

## An innovative EHR solution for the new era of healthcare delivery

CGM ENTERPRISE EHR™ is a trusted healthcare software solution for a broad range of specialties including Federally Qualified Health Centers (FQHCs) and Community Health Centers (CHCs). CGM ENTERPRISE EHR offers an excellent mix of adaptable templates and population health management tools that support specialized reporting to meet regulatory demands.

### Features and Functionality

- Accessible clinical best practices and treatment plans for decision support and population health management
- Functionality for easy tracking and sorting of medication and lab orders
- Robust reporting that meets Patient Centered Medical Home (PCMH) recognition requirements
- Bi-directional interfaces that support automatic population of results for open or closed encounters
- Time-saving "Document by Exception" or "Patterns" feature which reduces errors of omission with single-step, user-defined grouping of common information and action items into care plans and order sets
- e-Prescribing functionality that is compatible with web-enabled devices

## Clinical Decision Support. Optimal Health Outcomes.

Achieve optimal health outcomes with superior functionality that enhances your diagnoses and reduces the occurrence of errors.

## Fewer Clicks. Simplified Workflow.

Increase efficiency and reduce administrative costs through lean processes.

## Secure Data. Accountability.

Leverage sophisticated infrastructure, restricted user access, frequent data back-up and a real-time audit trail to safeguard your patient data.

## Testimonials

*"We felt that the CGM ENTERPRISE PM™ and CGM ENTERPRISE EHR™ could cater to our unique needs as an FQHC. Our goal was to commit to a PM product with the ability to handle our unique revenue management cycle and reporting requirements such as: sliding fee discounts, support for multiple encounter charge slips by service type, and UDS reporting. In regard to the EHR component, we were looking to create custom medical and dental templates with patient safety features such as Rx contraindication alerts. Also, documentation tools such as the EM Code Generator that helps level the CMS office visit and the Patterns feature that speeds up documentation."*

- Rick S. Lopez Chief Information Officer  
Vida Y Salud Heath-Systems, Inc.
