ANATOMIC PATHOLOGY MADE **EASY**

CGM

CompuGroup Medical

Laboratory Information System

CompuGroup Medical is a leader in e-health technology with an established, worldwide presence—more than 1.6 million customers in more than 56 countries.

INTUITIVE CLOUD-BASED DESIGN

Serving anatomic pathology labs since 1994, **CGM AP EASY** offers all the functionality you desire in an easy-to-use and affordable package.

• Surgical

Intuitive and easy to learn, CGM AP EASY is popular for all kinds of AP specialties including:

- Dermatopathology
- Urology
- GastrointestinalGYN Cytology
- Non-GYN Cytology

CGM AP EASY delivers a cloud-based solution that simplifies your in-house IT demands.

EXPERIENCE CGM AP EASY

EASY CONNECTIVITY

CGM AP EASY provides real-time access to your laboratory information system from anywhere. Connect securely through the cloud to accession specimens, print labels, or record results.

Convenience is the hallmark of CGM AP EASY. The CGM AP EASY portal delivers a real-time, integrated solution for transmitting orders and results.

EASY IMPLEMENTATION

A cloud-based, SaaS (software as a service) platform, CGM AP EASY reduces the demands on your lab's IT resources. CompuGroup Medical maintains your database in the cloud, and the LIS implementation process can be handled quickly and remotely.

EASY INTERFACES

Interface connections are a cornerstone of CGM AP EASY. HL7 or API connections streamline the interface process, reducing costs and improving turnaround times whenever your lab requires one. An interface between the lab and any third-party data collection partner, for example, will facilitate the seamless transmission of information to and from the laboratory.

EASY WORKFLOWS

CGM AP EASY offers an easy-to-use and intuitive user experience. A unique, tabbed environment presents all of the system's functionality neatly on a single screen. The LIS will automate workflow steps such as reflexing for molecular gynecological tests, eliminating tedious manual entry and reducing the possibility of human error.

EASY REPORTING

CGM AP EASY includes a wealth of standardized reports for labs to use, but clients can also customize their own report to stand out from the competition.

With the ability to create customizable macros with canned text, **CGM AP EASY** streamlines the accessioning and grossing process. Create unique abbreviations and populate multiple fields with a single click.

CompuGroup Medical

Laboratory Information System

TOTAL CONNECTVITY

Through its cloud-based portal, CGM AP EASY provides real-time access to your laboratory information system from anywhere. Secure HL7 and API interfaces connect your lab to EHR systems, practice management and billing software, third-party data collection partners, referring physicians, independent labs, and more.

CGM HAS AN ESTABLISHED LIBRARY OF INTERFACES:

- Electronic Health Records (EHR)
 - Independent Laboratories
- Hospital Information Systems
- State Health Departments
- Practice Management Systems
- Billing Software

AP IN THE CLOUD

The benefits of our easy, cloud-based interface have have proven to be very popular for anatomic pathology labs. From server maintenance to backups, the IT demands on your laboratory are measurably smaller with a cloud solution, and there is no sacrifice in the breadth of functionality afforded by the LIS.

Laboratory Information System

ADVANCED WORKFLOW

With capabilities such as internet reporting, interfacing to EMR/EHR and billing software, online order entry, auto faxing, and specimen tracking by case, CGM AP EASY offers a complete laboratory information system.

In addition, you can cater to the specific demands of your laboratory with advanced options including Surgical, Prostate, and GYN Cytology.

SURGICAL

Our Surgical option allows you to enter anatomic pathology orders either manually or by interface. Build a case easily by entering report requirements such as gross, microscopic descriptions, diagnoses, ICD-10 and CPT codes, and stains using canned macros, manual entry, voice dictation, or a combination of all three. Generate a .pdf sign-out to complete the process, and send finalized cases back to clients via web portal, fax, or HL7 interface.

Additional options are available for tracking frozen specimens, issuing a preliminary diagnosis report, adding images, and attaching documents. Use these for biopsies, non-GYN cases such as urine cytology, and FISH.

PROSTATE

The Prostate option expands on the surgical format by allowing the entry of prostate-specific fields like Gleason score, length, number of pieces, and percent involved. The data can be graphically displayed on a customizable prostate diagram along with color-coded text and graphical representations of the percent involved. Optionally, a Partin table graph may be included, as well. The Prostate option includes the efficient macro system that helps your lab specialists quickly generate and populate standard prostate scenarios.

GYN CYTOLOGY

The GYN Cytology options allows users to build a panel of tests; track and compare a cytotech, reviewer, and pathologist's interpretations; and run statistical reports against case modifiers. GYN Cytology allows you to report cases using their unique, required set of fields and create statistical reports.

Manage routine Pap smear samples using built-in CAP guidelines. The system automates the process of pulling random results for QC to meet Bethesda guidelines. Add reflex testing to Pap smears, based on results.
