

Simplify your workflow. **CGM APRIMA** frees you from the constraints of templates with an intuitive interface designed to follow the flow of a patient visit. Orthopaedists enjoy improvements in quality of care, patient satisfaction, quality of life, and to their bottom line.

Lightning speed documentation

- Document procedures and follow-ups in less than a minute.
- Enter data via ambient AI, voice recognition, dictation/transcription, touch screen, point-and-click, keyboard, or handwriting recognition.

Simplified data and order entry

- Choose your most frequent diagnoses, prescriptions, and follow-up procedures at a glance.

Effortless scheduling

- Reserve rooms, equipment, and providers with built-in profiles and time allocations.
- Schedule recurring visits, and create multiple, same-day appointments (e.g. x-ray followed by provider).

Customized segmentation

- Create a specific orthopaedic specialty care team for sub-specialty needs such a hand, hip, back, knee, etc.
- Track information about what you and your specific care team do.
- Tailor by practice, care team, and/or provider.

"I absolutely love doing my operation reports and hospital consultations in **CGM APRIMA**.

This solution kills three birds with one stone: I'm able to complete my hospital work directly in **CGM APRIMA** for my records and have it go to both the hospital and immediately to my billing department. It's a fabulous time-saver."

Automatic messages to referring physician or patients

- Create and transmit HIPAA-compliant notes back to the referring physician.
- Tailor notes based on your preferences and recipient roles without stopping to edit each one.
- Create patient-oriented visit summaries with non-medical terminology.

Speed and efficiency at the point of care

Providers tell us that **CGM APRIMA** saves time compared to the other systems they have used.

- No templates! Follow the flow of your exam. Chart quickly by chief complaint, procedure, problem, or previous visit. Carry past notes forward, so you're not charting from scratch, or use our powerful, ambient AI option that listens to encounters and creates structured notes, diagnoses, and orders.
- With adaptive learning, **CGM APRIMA** learns your treatment plans for common complaints. Easily order tests, document procedures, write prescriptions, and provide recommendations.
- Powerful interoperability capabilities help support your need to communicate with referring physicians and other specialists about patients in your care.
- Optional, advanced patient portal allows patients to enter clinical and administrative data, taking some of the load off of your team.

Medicare requirements and quality reporting initiatives

- Leverage **CGM APRIMA** to help earn incentives for Medicare's Merit-Based Incentive Payment System (MIPS).
- Easily track your time for Medicare's Care Plan Oversight, Chronic Care Management, and Transitional Care Management programs.

More efficient e-prescribing

Transmit patient prescriptions securely with electronic prescribing. This includes electronic refill requests, automatic medical history retrieval, and reconciliation and eligibility information.

- Instantly view co-pay costs for medications, and determine if a generic or equivalent medication exists.
- Built-in EPCS, PDMP, and electronic prior authorization for prescriptions support speed, safety, time-to-therapy for your patients.

Faster charting than with any other system

Providers tell us we are saving them a *minimum* of three minutes per patient, and often much more.

Unlike most EHRs that offer poor workflows and laborious screens to complete, our innovative technology adapts automatically to a physician's workflow and sets the benchmark for ease-of-use, speed, and flexibility.
