Revolutionize healthcare delivery with cutting-edge data mining

CGM ANALYTICS™ is an advanced healthcare analytics solution that facilitates the application of predictive science to clinical, administrative and financial operations. CGM ANALYTICS allows healthcare organizations to leverage a data aggregation and advanced analytics platform to promote the successful evaluation of healthcare costs, quality improvements and healthcare outcomes in an era of value-based care.

Interact with data in a new way

CLINICAL DASHBOARDS: Get an overall picture of the health status of your patient population to achieve goals for population health management more effectively. CGM ANALYTICS can be leveraged for effective disease surveillance. Based on the analysis of patient vitals, medication history, diagnosis codes and other health data, providers get a true picture of a patient’s health status.

FINANCIAL DASHBOARDS: Gain insight into your organization’s key financial metrics and how they impact revenue by analyzing trends for accounts receivable, aging, charges, payments and adjustments.

OPERATIONAL DASHBOARDS: Dive deeper into aggregate data to formulate successful population management strategies by effectively targeting at-risk patients.

Our team of experts can help you identify key performance indicators that are unique to your organization and configure custom dashboards as well as adhoc reports for your convenience.

FEATURES

• Full compatibility with electronic health records (EHR) and health information systems (HIS)
• Comprehensive reporting functionality that includes ad-hoc and pre-configured reporting templates which support the adherence to regulatory requirements of multiple entities
• Easy deployment and implementation
• Superior business intelligence
