AMBIENT **AI**

CGM AMBI

Ambient AI Solution

Patient notes in the age of AI

Clinicians strive to document the uniqueness of every patient encounter while also capturing the necessary structured data needed to satisfy quality, interoperability, and billing requirements. We use templates, keyboards, point-and-click, and voice dictation.

With the fully integrated **CGM AMBI Ambient AI Solution** for **CGM eMDs**, the most efficient and effective method is finally here. Step away from the screen and put more focus on your patients, creating a stronger human connection with every visit.

How does it work?

Unlike simple voice dictation, **CGM AMBI** listens to an entire patient encounter, parsing out and transcribing information from the doctor, nurse, patient, and even supporting family members.

When the visit concludes—no matter how the conversation flowed with the patient—**CGM AMBI** intelligently places the relevant information into each section of the note such as HPI or plan: chief complaint, HPI, review of systems, exam, plan, etc. Critically, it also suggests diagnoses, orders, and billing codes.

All you have to do is review, edit, or approve.

> "At CGM, we're taking great leadership with the development of artificial intelligence. We support structured codification and best practices so doctors can focus on patients and rediscover the joy of practicing medicine."

Ambient AI Solution

Less screen time, more eye contact

One of the most important reasons providers are always looking for speed and efficiency is to ensure less time in front of a screen and more time making eye contact and truly listening to the patients themselves.

This is where ambient AI makes the biggest impact for patient care and the interaction between provider and patient.

"In a fast-paced world where doctors are consumed by technology and an ever-growing workload, CompuGroup Medical is giving back the physician's most valuable asset: time."

ANDREW TUNNELL

VP, ARTIFICIAL INTELLIGENCE
COMPUGROUP MEDICAL

Key Features

- Ambient recording listens to an entire visit, taking notes and differentiating among multiple distinct voices at once
- Multi-language support shows the language being spoken in the live transcription, then generates English text in the note
- Automatic code generation supports CPT®, HCPCS, and ICD-10 codes with confidence ratings to assist with a speedier review
- Order creation works with a provider's saved templates, and a provider can quickly review, edit, and send the order from within **CGM eMDs**
- Guidance for clinical best practices based on the visit narrative helps practices meet quality requirements

Flexible entry options

When you are doing a physical exam, you may not want to narrate everything in front of the patient. You could wait until the patient exits to finish voicing your remaining note, but **CGM AMBI** is flexible enough that you can still append and edit information using any of the standard methods you've always used.
