CGM APRIMA

EHR and Practice Management

CGM APRIMA NOW Technology, For Smartphones & Tablets

If you have Apple® or Android™-based smartphones or tablets, CGM APRIMA has a mobile application that enables you to access your practice's EHR system right from your device. Offering optimal functionality and usability, CGM APRIMA NOW delivers the latest in cross-platform technology. Providers can always connect to their patient records and extend their productivity beyond the four walls of their practice to:

- Review complete patient medical histories

- Act on lab results

- Correspond with patients through the secure portal

- View and manage schedules and create new appointments

- Capture patient charges

We leverage HTML5 and native environments providing interface consistency across all platforms while taking advantage of native device functionality. Additionally, the platform is equipped with a modern interface that utilizes touchscreen and pen-based displays. Employing a powerful Internet communication architecture, the platform enables peak application performance on cellular and Wi-Fi networks while keeping data secure using the latest in encryption technologies.

"I love working with the new **CGM APRIMA** NOW technology. There are some great features, like the way I can see my ultrasound reports. I also use the app to check patient diagnoses when I generate my ultrasound report. In addition, being able to submit the approval documents to insurance companies for the procedures I do in the office right from the app makes my life easy."

JOE JENKINS, MD

CGM APRIMA Replication

CGM APRIMA offers physicians the ability to document visits, review charts, and perform everyday tasks even without access to a wireless connection. "Replication" stores current charts on your local drive allowing you to see and modify data, and automatically syncs information the next time it connects to the Internet.

Replication goes beyond other technologies to let providers do everything out of the office that they can do in the office.

Whether it's seeing patients in a hospital, a nursing home, or the patient's home, physicians can see the patient's full history and chart the visit as usual. They can also order labs and send e-prescriptions.

No Internet? No problem. In addition to connecting anywhere and anytime you do have an Internet connection, when you're out of range, everything is saved on your computer and sent automatically when the Internet connection is restored.

The secret behind CGM APRIMA Replication technology is its ability to save key information on the provider's laptop or tablet computer, allow the user to manipulate or add data when separated from the server, then sync invisibly when the machine comes back within range of a signal.
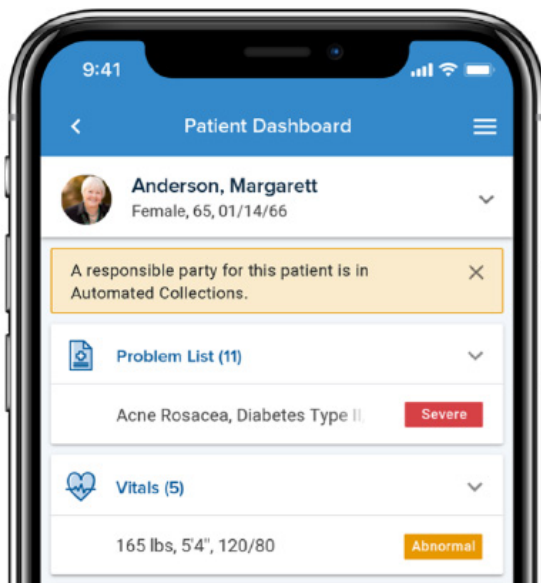

How is CGM APRIMA Replication Different?

- Enter patient chart notes, orders, e-prescriptions and more.

- Based on a profile you create you'll always have the data you want and need.

- CGM APRIMA doesn't require you to have another server to duplicate the entire database.

- Replication syncs automatically, updating everything you need to see or send.

- Only CGM APRIMA utilizes both touchscreen and pen-based displays.

Only CGM APRIMA offers this unique functionality! Other systems just offer read-only access to selected data.

Take CGM APRIMA To Go

Find out more about all the ways CGM APRIMA makes it easy to take care of your patients, and your practice, no matter where you go.
