

AI DOCUMENT PROCESSING

CGM INDEX.AI

Document Linking Solution

A STRONGER
HUMAN CONNECTION
IN THE AGE OF AI

The need for AI-driven document management

Practices are inundated with incoming documents and faxes.

Even the most efficient workflows require significant manpower to handle non-standard documents, extracting patient information, discerning document types, matching them accurately to patient charts, and ensuring they reach the appropriate staff for review and approval. This process can demand the full attention of dedicated team members.

Imagine if you could automate these tasks through artificial intelligence, allowing your team to focus on high-value operations that directly impact patient care.

Enter CGM INDEX.AI

CGM INDEX.AI is the transformative solution designed to revolutionize your document management processes.

Seamlessly integrated with **CGM APRIMA**, this tool streamlines operations, saving your practice valuable time and money while enhancing efficiency.

"CGM's mission-driven purpose is to help practices focus on their patients. AI-driven document automation streamlines practice operations, enabling a renewed focus on patient-centered clinical tasks."

Less administrative burden, better patient service

By minimizing the demands of manual document management, providers and staff can focus more on patient service, maximizing their productivity.

CGM INDEX.AI manages the routine tasks so your team can focus on critical clinical work. Eliminate the repetitive tasks for your staff, reduce burnout, and ensure seamless document routing aligned with your unique clinical protocols.

How it works for you

With **CGM INDEX.AI**, you're in control. Select which document linking folders to monitor using an intuitive mapping tool. Then, let the AI take over from there.

As documents are received—whether by fax, scan, or other existing methods—**CGM INDEX.AI** automatically routes them based on your specified protocols. The AI reviews each document, detects key information such as patient names and birthdays, and classifies and directs the document appropriately.

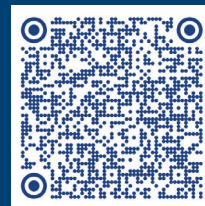

The AI also summarizes document content in the Note field, expediting the review process and allowing your team to focus on what truly matters.

If full automation isn't possible, **CGM INDEX.AI** intelligently compiles all available information and routes the document to your designated exception handlers, reducing their workload considerably.

Embrace the revolution in document management with **CGM INDEX.AI**—because your patients deserve your undivided attention.

Key Features

- Intelligent document matching and routing
- Comprehensive data extraction to automatically identify patients, name files, classify documents, and summarize content
- Direct links between results and pending orders
- Smart orientation (no upside-down scans)
- Customizable approval routing based on your clinic's specific rules
- Seamless integration with **CGM APRIMA**
- Compatibility with your current fax integration and document management systems, including the Kno2 solution
