

EXCLUSIVE SOFTWARE OPTIONS

CGM LABDAQ

Laboratory Information System

Functionality exclusive to CGM LABDAQ

Compared to our older software, LabDAQ 4, **CGM LABDAQ** represents a marked improvement inside and out. Building upon a modern .NET architecture and relying on a trusted MS-SQL database, **CGM LABDAQ** offers many improvements beyond its intuitive and customizable user interface.

Chief among these improvements is the functionality afforded by six exclusive software options: Lab IQ, Lab Insights, Inventory Management, Workflow Management, Document Management, Specimen Storage, and PCR Linking.

Better serve clients and patients

With the options available exclusively for **CGM LABDAQ**, you will be able to offer superior service today and into the future as your facility grows.

- Analyze trends and productivity
- Streamline your inventory intake and removal
- Simplify multi-step workflows and antibiotic resistance reporting
- Better maintain CLIA compliance
- Easily locate specimens for retesting or outsourcing

Synchronizing Healthcare

**CompuGroup
Medical**

Lab IQ

Allow users to view laboratory performance metrics in a user-friendly dashboard that eliminates manual processes and offers business insight through advanced analytics and reporting. Available dashboards include Monthly Panel Trends, Lab Tech Productivity, TAT Analysis, Financial Trends, and more.

Lab Insights

An upgraded version of Manager Review, Lab Insights allows users to monitor laboratory workflow from specimen collection to lab receipt to test completion. A customizable, dynamic layout lets your lab view and address all kinds of internal details at a glance: turnaround time, pending samples, released samples, reports, and manual result entry.

Inventory Management

Increase efficiency by facilitating the quick intake and removal of inventory. Lab inventory is searchable and quickly accessible, which saves time and reduces errors and waste. Users are alerted when inventory is low or nearing expiration. Users can quickly determine reagents used for each test and obtain all accessions associated with a given reagent lot.

Workflow Management

Simplify workflows where multiple intermediate steps, with or without results, are part of an overall process to generate a reportable result. Users can easily determine what steps for various workflows are pending and quickly build plate maps, alleviating manual documentation and processes.

Specimen Storage

Track the storage location of specimens following testing. Users can quickly find stored specimens for retesting or to send to other facilities for additional testing.

PCR Linking

CGM LABDAQ supports PCR detection of pathogens and antibiotic resistance genomes. The PCR Linking option simplifies the PCR setup and automates the reporting of a sensitive or resistant antibiotic result without the need for complex functions.
