

EXCLUSIVE SOFTWARE OPTIONS

CGM LABDAQ

Laboratory Information System

Functionality exclusive to CGM LABDAQ

Compared to older versions of the software including LabDAQ 4, **CGM LABDAQ** represents a marked improvement inside and out. Building upon a modern .NET architecture and relying on a trusted MS-SQL database, **CGM LABDAQ** offers many improvements beyond its intuitive and customizable user interface.

Chief among these improvements is the functionality afforded by five exclusive software options: LAB IQ, Inventory Management, Workflow Management, Document Management, and Specimen Storage.

Better serve clients and patients

With the options available exclusively for **CGM LABDAQ**, you will be able to offer superior service today and into the future as your facility grows.

- Analyze trends and productivity
- Streamline your inventory intake and removal
- Simplify multi-step workflows
- Better maintain CLIA compliance
- Easily locate specimens for retesting or outsourcing

Synchronizing Healthcare

CompuGroup
Medical

Lab IQ

Allow users to view laboratory performance metrics in a user-friendly dashboard that eliminates manual processes and offers business insight through advanced analytics and reporting.

Available dashboards include Monthly Panel Trends, Lab Tech Productivity, TAT Analysis, and more.

Inventory Management

Increase efficiency by facilitating the quick intake and removal of inventory.

Lab inventory is searchable and quickly accessible, which saves time and reduces errors and waste. Users are alerted when inventory is low or nearing expiration. Users can quickly determine reagents used for each test and obtain all accessions associated with a given reagent lot.

Workflow Management

Simplify workflows where multiple intermediate steps, with or without results, are part of an overall process to generate a reportable result.

Users can easily determine what steps for various workflows are pending and quickly build plate maps, alleviating manual documentation and processes.

Document Management

Assist with attaining and maintaining CLIA compliance.

Users can document approval and review of documentation and ensure the most recent documentation is available to all users. This option is web-based so that documents may be accessed by remote users.

Specimen Storage

Track the storage location of specimens following testing.

Users can quickly find stored specimens for retesting or to send to other facilities for additional testing.
