Valued Clients,

I am pleased to announce the General Availability of CGM LABDAQ v24.4 from CompuGroup Medical.

The key improvements introduced to CGM LABDAQ Laboratory Information System in v24.4 are summarized below.

Auditing improvements

- Includes the ability to search and view the audit log for reporting type (to see only physician reports, for example)

Improvements to the PCR Linking option

- This software option supports the use of PCR tests for microbiology tests. New improvements to the module include:
  - Ability to suppress PCR Analyzer Results on a panel (since not all isolates tested for may be on a particular panel) and confine the results to panel-specific organisms
  - If an isolate result is rejected, all its sub-tests will automatically be rejected

Rules expansion for more robust microbiology and billing use

- Microbiology Rules improvements (also relevant to the PCR Linking option) where users can now leverage the following:
  - The new criteria of Result Flag Result Qualifier
  - The new action of Unsuppress an isolate
- Billing Rules improvements
  - Users can now leverage Result Flag and Result Qualifier

Interface Management improvements

- Users can see Work Order information when looking up Work Orders by accession in the reconciler, plus more information about the panel
- A new Error Counts Alert enables users to set an alert for import and export errors that exceed x errors per y minutes for prompt troubleshooting

In addition to these enhancements, there are many cumulative features that have been delivered throughout multiple versions of CGM LABDAQ. See **Appendix A**.

Appendix B provides answers to Frequently Asked Questions regarding the update from Oracle to MS-SQL Server that we introduced in March 2020, with CGM LABDAQ v20.1.

We look forward to offering this version and continuing our commitment to supporting your operations.

Sincerely,
