

Valued Clients,

I am pleased to announce the General Release of CGM SCHUYLAB v4.1 from CompuGroup Medical. There are several exciting new features in version 4.1 that our customers have been wanting.

CGM SCHUYLAB v4.1 offers compatibility with three new, add-on options that provide our clients with more versatility to improve communications and better manage inventory.

**PCR Micro**

- Evaluate raw PCR testing outcomes against established Sensitivity and Resistance patterns.
- Create visual reports to help providers quickly identify the most effective antibiotics.

**Sample Tracking**

- Track the current locations of samples and aliquots within the laboratory and across different storage areas and locations.
- Streamline the processes for identifying, storing, retrieving and disposing of specimens.

**CSV Import**

- Facilitate the import of a new client's demographics and test orders using a csv file.
- Generate new patient records, link to existing patients, create accessions, and place test orders.
- Import data dynamically in the background, processing the information as soon as a file is placed in an established location.

Sincerely,

**Carl Smith**

COO, CompuGroup Medical, Inc.
